

Midas Health Analytics Solutions

Strategic Performance Management

The Value of Integration

With over 2,500 client hospitals nationwide, the Midas Health Analytics Solutions suite of solutions is proven to increase hospital operational efficiency. Midas provides integrated solutions that allow you to leverage the advantages of a single vendor. While most Midas products are available as standalone components, when integrated they share data seamlessly. The solution integration eliminates duplicate effort and maximizes workflow efficiency and reporting across your organization.

Whether your needs are for management of care coordination, quality, risk, clinical decision support, provider information, patient throughput, accreditation, or any combination of these, the Midas family of integrated solutions provides an indispensable resource.

Our customers say they would choose Midas Solutions again because of the quality, versatility, and user-friendly operation, as well as for our high level of technical support, and prompt follow-up on concerns.

Our strength in the healthcare marketplace has been to understand client needs and provide solutions to a rapidly changing healthcare delivery system. Working together with attention to your requirements, we will continue to deliver applications and features so you can achieve your goals, provide superior care to your patients, and increase hospital profitability.

Streamlined Workflow

Electronic worklists and seamless navigation allow users to perform and track their daily tasks. Paperless workflow tailored to your processes facilitates communication and accountability.

Our Midas Care Management solution provides appropriate role-based access to information, eliminates duplicate data, and reduces the need to access multiple systems. Midas Care Management promotes staff efficiency, productivity, and satisfaction.

Rules-based Processing

Midas Care Management provides the ability to create custom rules and generate individual worklists triggered from those rules.

User preferences for display fields and sort order, as well as easy access to associated entry functions, provide a worklist that is flexible and easy to use.

Midas Care Management enables organizations to build business process rules using any combination of data fields, automating existing processes and ensuring critical events are not overlooked.

Custom Data Collection

The robust Midas suite of solutions includes significant customization functionality to support unique organizational processes and requirements.

Clients can add their own custom fields, define input forms, and collect data specific to their organizational processes. This information can be used for rules-based processing, generating worklists, organizing daily workflow, and providing a wide array of reporting needs.

Robust Reporting

Midas solutions provide a number of powerful and customizable reporting options beyond system-generated standard reports.

Users can schedule when reports are compiled, define document groups, and seamlessly deliver reports via e-mail or fax.

The Midas ReporTrack™ tool allows users to build custom reports without extensive knowledge of data management concepts.

Midas also provides SQL open-system reporting accessible from any ODBC-compliant, Microsoft® Windows-based, industry standard product.

Product	Overview
Care Management	<p>Integrates discipline-specific subsystems, including:</p> <p>Hospital/Community Case Management (patient throughput process – authorization, certification, concurrent review, clinical documentation improvement, and discharge planning)</p> <p>Quality Management (blood, critical care, drug, obstetrics, neonatal, surgery, and peer review)</p> <p>Infection Management (surveillance, data analysis, and reporting functionality)</p> <p>Risk Management (browser-based entry of adverse events and patient feedback as well as worker’s compensation and claims management)</p>
Midas Live™ System	<p>Web-based, real-time clinical surveillance in a Software as a Service (SaaS) infrastructure</p> <p>Concurrent tracking of Clinical Quality Measures and Core Measures</p> <p>Emerging clinical complication alerts and notifications</p> <p>Certified EHR Module, Meaningful Use Stage 1 and 2 Clinical Quality Measure Data Capture and Reporting – CCHIT certificate CC-2014-115040-1</p>
Midas DataVision™ Services	<p>Provides robust data analysis, including access to over 10,000 performance measures in our national comparative database</p> <p>Enables hospital administrators to benchmark performance against nationally recognized thresholds</p> <p>Optional Cost of Care Analytics helps hospitals understand their cost differentials and define cost differences between providers and among clinical populations and national benchmarks</p>
