

# Midas Health Analytics Solutions

Outcomes Advisory Services

“The greatest value of a picture is when it forces us to notice what we never expected to see.”

–John Tukey, American Mathematician

In the last 5 years, healthcare analytics has dominated industry strategic initiatives. Healthcare Analytics has moved beyond dashboards, scorecards and pixel perfect reports. We use data and information in everyday conversations from the hospital unit to the boardroom. Statistical and qualitative analysis and explanatory and predictive modeling are used to improve patient outcomes across the continuum of care.

As political uncertainty looms over healthcare and payment reforms, look for analytics to expand further by developing more complex strategies to blend financial, operation and clinical data to achieve quality initiatives, cost containment, manage provider networks and meet the every changing needs of tech savvy patients and constituents.

## How We Help

Health systems are gathering increasing amounts of patient, provider and procedural data. At Midas, we are expert in the gathering process working with over 2200 health facilities across the US. This vast assembly of data is meaningless however, without knowing how and when to use the information so carefully collected.

At Midas Health Analytic Solutions, we strive to define a “culture of data,” silencing the noise and identifying those key data drivers critical to organizational success and positive patient outcomes.

By carefully crafting a Healthcare Analytics Strategy, we enable healthcare organizations to harmonize their data, understand and prioritize the implications and delivery of their data, and create governance to maintain the integrity of both the data and their healthcare organization.

Through a deep understanding of the healthcare analytic landscape, we can help you create your own Healthcare Analytic Strategy by:

- Identifying and establishing data governance strategies to set the stage for success - aligning IT, clinical and administrative stakeholders.
- Discovering and prioritizing key financial, clinical and operational drivers in support of tactical organizational initiatives - increasing efficiencies, patient outcomes and financial milestones.
- Partnering to develop a living analytics roadmap to be utilized throughout the organization to further the data discussion and drive performance.
- Utilizing proven data adoption methodologies to enable a “culture of data”, allowing for each level of the organization to have the data they need when they need it.
- Provide thought leadership and guidance through the world of advanced, predictive and prescriptive analytics, helping you determine when, where, and how to use them.

Midas Health Analytic Solutions is also driving innovation and the future by developing advanced analytic application in support of:

- Improving the patient experience
- Reducing readmissions and hospital acquired conditions (HACs)
- Identifying new risk and revenue models
- Enabling population health through acute, ambulatory and community data analytics

### **About Conduent**

Conduent is the world's largest provider of diversified business process services with leading capabilities in transaction processing, automation, analytics and constituent experience. We work with both government and commercial customers in assisting them to deliver quality services to the people they serve.

We manage interactions with patients and the insured for a significant portion of the U.S. healthcare industry. We're the customer interface for large segments of the technology industry. And, we're the operational and processing partner of choice for public transportation systems around the world.

Whether it's digital payments, claims processing, benefit administration, automated tolling, customer care or distributed learning – Conduent manages and modernizes these interactions to create value for both our clients and their constituents. Learn more at [www.conduent.com](http://www.conduent.com).
